

Stop applying *blind.*

An AI job-search assistant for Indonesia that scores **every** new posting **0–100** — with the exact skills you match and the gaps to close.

● LIVE IN PRODUCTION

INDEED · JOBSTREET

CARIINKERJA.ID

Job hunting in Indonesia still feels like *2010*.

- 01 Open Indeed in one tab, JobStreet in another. Scroll past hundreds of postings.
- 02 Skim long JDs, copy-paste your resume into 200 forms, hope something sticks.
- 03 Most were never a fit — wrong stack, seniority, location, contract type.
- 04 Candidates burn their evenings. Recruiters drown. Nobody wins.

200 apps

→ ~5 that fit

There has to be a better signal than ~~"I applied to everything."~~

We do the daily screening *for you* — automatically.

Connect LinkedIn once. Every day, an AI reads each fresh posting against your profile and returns a calibrated fit score plus a skill-gap map. You open the dashboard, sort by score, and focus on the *5–10 jobs that actually fit* — instead of the 200 random ones in your inbox.

1×

setup,
not daily grind

every

posting scored,
nothing skipped

0–100

a number you
can act on

Four steps. Then it runs itself.

STEP 01

Connect LinkedIn

We ingest your profile, then an LLM cleans and structures it into the exact shape our assessor needs.

APIFY + LLM CLEANUP

STEP 02

Set preferences

Title, remote vs. on-site, full-time vs. freelance, and which source to crawl. Set once.

ONE-TIME CONFIG

STEP 03

Crawl daily

Background workers pull fresh postings matching your preferences from Indeed & JobStreet. No manual scrolling.

CELERY · AUTOMATED

STEP 04

Score every job

An LLM reads each posting against your profile and returns a structured 0–100 assessment.

GPT-40 · STRUCTURED

Backend Engineer

VERDICT · BAHASA

"Cocok banget sama kamu — stack-nya kepake semua. Tinggal pelajari K8s dikit, peluangnya gede."

Not a match flag — *a decision tool.*

0–100 Calibrated fit score

How well your profile fits this specific posting.

✓ / ✗ Skills matched & missing

Hard and soft. The gap list doubles as a "what to learn next" map.

"..." Plain-Bahasa verdict

Why it fits or doesn't — casual "kamu", no corporate-speak.

~ Status tracking

Seen · applied · accepted · rejected, as you work the list.

Gaps matter. A binary match hides too much.

THE BETTER LEAD

72

with **2 fixable gaps**

— a few weeks of focused learning

Closeable. You can act on it. We surface the number **and** the gaps so you can decide for yourself.

THE MIRAGE

85

but a callback
you'll **never get**

A higher number you can't convert. Binary "match" would have ranked it first — and wasted your week.

The verdict text adds the human context: not just the number, but *why*.

Live, in production, working every day.

HIGH-FIT MATCHES

score 80+, surfaced to users

● Paying Indonesian seekers using it daily ~1 in 5 assessed jobs clears the 80+ high-fit bar 22x more assessments than profiles — the pipeline compounds

Prove the signal free. Then pay as you go.

FREE TIER

Rp 0

- ~20 assessments included
- See the signal before paying
- No card, no friction

SUBSCRIPTION

30-day cycle

- Pay-as-you-go, no annual lock-in
- Daily crawl + unlimited scoring
- Cancel anytime

OPEN-TO-WORK

Auto discount

- Toggle "Open to Work" on LinkedIn
- Cheapest plan auto-discounted
- Hunting hard ≠ paying full price

"We don't sell to people who can't afford it." Sustainable over predatory — fewer paying users who get real value beats a churn-and-burn funnel.

A vertical pipeline, built for this market.

01 Structured scoring pipeline

Every score is schema-validated (Pydantic) — not free-text. A cheap relevance gate runs first, the full model only on real candidates. Reliable, idempotent, retried.

02 Local-first by design

Indonesian job boards, Bahasa "kamu" verdicts, IDR pricing, LinkedIn-native onboarding. Built for the market, not translated into it.

03 Open source & auditable

AGPL-3.0. Users can verify how scoring works and how their data is handled — trust as a feature, not a promise.

04 Shipped & operating

Full async crawl-and-assess infrastructure already in production, running daily for paying users. The hard part is built.

J

Jordan

SOLO TECHNICAL FOUNDER

Designed, built, and shipped the entire product — frontend, backend, async pipeline, payments, and the LLM scoring engine.

One operator who *builds and ships*.

From LinkedIn ingest to daily crawls to structured LLM assessment to a paid subscription flow — the full stack is live and running, built and operated by one person.

Django 5.2 / DRF

React 19 / TanStack

Celery + Redis

OpenAI structured output

Mayar payments

Google OAuth

Apify ingest

Turn the job search into a *calibrated signal*.

NEXT

More sources

Add job boards on user demand — widen the daily crawl surface.

NEXT

Gap → learning loop

Turn skill gaps into concrete next-step recommendations.

VISION

Beyond search

Extend the fit signal across the whole career-decision journey.
